# Lynn's Legacy Cenizo

(*Leucophyllum langmaniae* 'Lynn's Legacy')

Cenizo, also known as purple sage, is a native that is extremely well adapted to Bexar County. 'Lynn's Legacy' is a cultivar that was selected for its profuse and frequent flower displays. It grows slowly with a dense, rounded form. Its sage green foliage is a wonderful backdrop for the lavender flowers. Compared to most selections of purple sage, it is not as dependent on changes in relative humidity for flowering and can bloom more often during the course of the summer than other selections.
